

Tushar Dharia

Machine Learning Engineer with Generative AI Skills | [tushardharia](https://tushardharia.com) |
dhariatushar@gmail.com | +91-9820507542

Objective

Energetic and innovative Generative AI Engineer eager to leverage a profound background in AI, specializing in vector databases, LLM frameworks, and cloud deployments. Aims to apply technical skills and creativity in developing state-of-the-art AI solutions within a dynamic team setting.

Education

Bachelor of Engineering in Computer Science

University of Mumbai, 2022

Relevant Coursework: Machine Learning, Artificial Intelligence, Data Structures and Algorithms, Natural Language Processing, Computer Vision

Skills

- **Programming Languages:** Python, JavaScript, Java, C#
- **Frameworks & Tools:** LangChain, LlamaIndex, FastAPI, Django
- **Generative AI LLM Models:** Llama, Mistral, OpenAI GPTs, Google Gemini
- **Vector Databases:** ChromaDB, Pinecone, Azure AI Search
- **Database Management:** Experience with MySQL, MongoDB, PostgreSQL in production environments,
- **Deployment Platforms:** Azure AI Services, AWS Bedrock, AWS (EC2, Lambda), Hugging Face Spaces
- **AI/ML Techniques:** RAG, Agentic AI, AI Agents, Fine-tuning, NLP, MLOPS
- **Soft Skills:** Analytical thinking, problem-solving, teamwork, effective communication

Professional Experience

Promact Infotech, AI/ML Engineer

June 2024 – November 2025

Dataviv Technologies, Machine Learning Engineer

November 2023 – June 2024

Fintoo, Jr. Software Engineer

May 2022 - October 2023

Projects

RAG Chatbots for Q&A with LlamaIndex

- **Overview:** Engineered RAG chatbots that provide accurate, context-aware answers by integrating Azure AI Search for vector database and OpenAI GPT based models.
- **Technologies:** Azure AI Search, LlamaIndex, Python, OpenAI
- **Outcome:** Achieved a 40% reduction in the need for human intervention in customer service inquiries, improving response accuracy and user satisfaction

Multi-Agent AI Pipeline with Chatbot using Langchain

- **Overview:** Engineered chatbot that provide accurate, context-aware answers regarding reports and reporting standards and regulations by integrating RAG Agents to answer inquiries and perform analysis.
- **Technologies:** LlamaIndex, Azure OpenAI Models, Azure AI Search, vector embedding algorithms, Azure AI Search Vector Database. Postgres Database.
- **Outcome:** Achieved a 90% reduction in the need for human in client report inquiries, improving report analysis accuracy and report compliance.

Brain Tumour Detection using CNN | [Link](#)

- **Overview:** Developed a model that detects brain tumour in MRI Images using Convolution Neural Networks.
- **Technologies:** Python, TensorFlow, AWS.
- **Outcome:** Achieved a 97% accuracy in identifying tumours in MRI Images.

ATS Resume LLM App

- **Overview:** Developed an application optimizing resumes for ATS using OpenAI APIs, enhancing match rates for job applications.
- **Technologies:** OpenAI APIs, Python
- **Outcome:** Achieved a 50% improvement in ATS match rates, increasing users chances of securing interviews

Roles and Responsibilities

- **Managed and optimized vector databases** such as ChromaDB, Azure AI Search and Pinecone, enhancing AI applications' data retrieval capabilities.
- **Handled Azure AI Search in production environments**, ensuring optimal performance and reliability for AI-driven applications.
- **Developed scalable AI solutions** using LangChain and LlamaIndex frameworks, demonstrating expertise in generative AI technologies.
- **Implemented AI driven solutions using both open-source and paid LLM models**, customizing solutions to meet specific project requirements and performance goals.
- **Leveraged Azure AI Services for deploying and managing AI models**, utilizing cloud services to ensure scalability and reliability of AI applications

Achievements

- **Innovative AI Solutions:** Successfully developed and deployed cutting-edge AI applications, demonstrating a strong impact in enhancing user engagement and operational efficiency.
- **Technical Leadership:** Led team and projects to pioneer the use of generative AI technologies in practical, real-world applications.
